

NanoVi™ for spas

The NanoVi™ is an easy-to-use device that perfectly complements existing spa treatments. It's a safe and effective way to promote vitality and well-being while simultaneously creating new spa revenue. Spa managers love its effectiveness and the ability to offer it concurrently with other treatments.

Spa and Client Benefits

The NanoVi™ device works as either a stand-alone service or as part of a package. It leaves clients feeling vital and energetic while promoting a deep, restful sleep at night. Many spas favor using the device paired with other treatments because clients see better results and have a more revitalizing spa experience. The NanoVi™ enhances the benefits of bodywork, detox treatments, or weight loss protocols and is easily combined with most spa services.

How it Works

The NanoVi™ was designed for intuitive and easy operation for both staff and clients. The client inhales moist air from either a nasal cannula or the touch-free flex arm delivery system and may be sitting up or lying down during their session.

Initiating a session is as simple as pressing the start button and the preferred session time can be stored in memory. When the session is complete the device will automatically stop. Since the NanoVi™ is easy to use, clients may also operate it themselves, with prepaid SmartCards.

Eng3 offers complete support and training for the NanoVi™. Staff can be ready to introduce and operate the device in a few hours or less.

For Business Success

The NanoVi™ device:

- offers a tremendous health benefit for spa clients
- is cost effective and profitable, often paying for itself in a matter of months
- requires almost no maintenance, service, or staff training
- uses little space; the NanoVi™ can augment a relaxation area or be easily moved on a cart
- comes with all the materials and online content needed for marketing to clients
- is a great new service for promoting your spa and differentiating it from the competition

The Technology

At the cellular level, the human body naturally produces biological signals to initiate or contribute to all kinds of cellular function. One of these signals triggers oxidative response, the regeneration and repair that counterbalances oxidative stress damage. Because the precise signal for oxidative response is known, a bio-identical signal can be created to augment this specific signaling capability.

NanoVi™ devices produce the precise bio-identical signal known to initiate oxidative response. Therefore, this patented technology assists the natural biological signal to regenerate and repair oxidative stress damage and ultimately boost cellular activity. Markers for oxidative stress damage and the repair of DNA damage have been used to show the effectiveness of NanoVi™ technology.

What Spa Professionals Say

“The NanoVi Pro™ device has become a key part of our spa services. It helps differentiate us from competition, attract new business and make other treatments more effective so customers see better results.” – K. B., Spa Director

“I have clients who don't want to leave the spa without using this device. It gives them a boost of energy that they wouldn't want to go without.” – M. A., Spa Owner

“This device enables our weight loss protocol. It gives people the extra energy they need to feel good on a restricted calorie diet.” – J. K., MD and Wellness Center Owner

“It is easy to see why leading spas offer the Eng3 device in conjunction with massage. It makes a real difference in the effectiveness of bodywork and clients love the experience.” – B. D., Massage Therapist

“We are so impressed with the NanoVi™ device. Clients love it and want to do a session before other spa treatments. They recognize that it helps the body work better.” – M. N. Spa Owner
