

NanoVi™

for sports and performance

The NanoVi™ device is a safe and effective way to promote health and rejuvenation. Bouncing back from strenuous workouts faster, helps athletes train harder, stay healthier, and perform their best. NanoVi™ technology is easy to use and incorporate in a training regime. Athletes inhale moist air from either a cannula or a touch-free delivery system, while sitting or lying down. It can also be used while training on stationary equipment.

Why athletes value NanoVi™ technology

Performance athletes experience a demanding cycle of oxidative stress damage and repair. Pushing to the limit is essential for building strength, endurance, and ability. However, it also generates additional free radicals, leading to oxidative stress damage. Damage must be prevented, or repaired quickly, for an athlete to stay healthy and perform well.

Athletes use NanoVi™ technology to counterbalance oxidative stress damage resulting in:

- improved utilization of oxygen and nutrients
- stronger immunity and recovery from illness or injury
- better balance of the autonomic nervous system leading to better sleep and repair
- increased cellular activities including energy production, detoxification, and many more
- greater ability to prevent or address age-related illnesses

The Technology

At the cellular level, the human body naturally produces biological signals to initiate or contribute to all kinds of cellular function. One of these signals triggers oxidative response, the regeneration and repair that counterbalances oxidative stress damage. Because the precise signal for oxidative response is known, a bio-identical signal can be created to augment this specific signaling capability.

NanoVi™ devices produce the precise bio-identical signal known to initiate oxidative response. Therefore, this proprietary technology assists the natural biological signal to regenerate and repair oxidative stress damage and ultimately boost cellular activity. Markers for oxidative stress damage and the repair of DNA damage have been used to show the effectiveness of NanoVi™ technology.

What professionals say

“For athletes it is especially important to support the body’s natural repair process. Exertion creates additional free radical damage and micro tears and other tissue damage that undermines health. For this reason I recommend that athletes, especially endurance athletes, incorporate NanoVi™ technology in their training regime”. L. Martinez, MD

“Since using NanoVi technology my endurance has increased remarkably and my recovery time is amazing. Normally after a four-hour workout one day I would need to rest the next day but not anymore. I’m not getting the amount of micro-tearing that I normally would get and I don't have the stiffness or soreness, it’s a big difference”. K. Cashion, ND, DC, Triathlete

“I use Eng3’s device all day to help my clients heal from disastrous injuries, it helps make them more responsive to bodywork. The outcome is better because their tissue is more relaxed and receptive to change”. B. Dobbs, LMT

“This is a device I recommend for a wide range of people. My patients and I have benefited greatly from it”. K. Epstein MD, Orthopedist, Sports Medicine

“I skied in the Olympics more than 40 years ago and I still push myself hard. The NanoVi Pro™ definitely helps me bounce back faster and feel good after overexertion. I wouldn’t be without it, it’s ideal for anyone who want to stay fit and active for their whole life”. J. McIntosh, Olympian, Ski Instructor

NanoVi™ for fitness centers and trainers

The NanoVi™ device was designed for intuitive and easy operation. It has a smart card system so members of a performance center or health club can administer their own sessions using prepaid SmartCards. Eng3 provides the support, training, and materials needed to successfully implement the NanoVi™. It is easy for staff to learn about the technology and represent it to clients.

The NanoVi™ device:

- complements coaching and other services, making programs more effective
- is cost effective and profitable, typically paying for itself in a matter of months
- uses little space and can be added to existing areas or moved around on a cart
- is easy to take to a client’s site then operate from a sturdy transportation case
- has almost no ongoing cost, maintenance, or service
- comes with all the materials and online content needed for presenting to clients
- is an exciting new service to offer existing clients or attract new ones
