

NanoVi[®]

*The ultimate innovation to support
health, performance, and healthy aging*

*A unique way to promote vitality
and resilience at the cellular level*

Health & Recovery

Whether addressing an illness or reestablishing vitality and quality of life, improving cellular repair is essential. Repair is needed to counteract the constant damage of oxidative stress, which is implicated in the aging process and most diseases. All the body's repair work is done by proteins so improving protein functions can have wide-ranging benefits. Boosting the repair of oxidative stress damage increases a person's ability to reclaim lost function and reinstate health.

Some health and prevention benefits may include:

- better utilization of oxygen and nutrients
- stronger cell energy production
- improved cell metabolism
- faster regeneration of cellular damage
- better protection against free radical damage
- stronger immunity

"My elderly mother had such a remarkable turnaround after using the NanoVi device that I got another one for my father. Recently I got one for myself and it has given me new energy. I feel great and coworkers tell me I look radiant."

- Eng3 client with three NanoVi devices, Vermont

Sports & Performance

NanoVi technology is one of the most advanced ways to optimize performance. Benefits of using it are reported by athletes and trainers. Athletes use NanoVi devices for:

- superior physical performance
- faster regeneration
- sharper concentration
- stronger immunity for intense training
- quicker reflexes
- better utilization of nutrients

Some of the tests used to show that NanoVi is helpful to athletes include measures of:

- lactate in blood
- DNA damage
- inflammatory markers
- immune response

"I wouldn't go anywhere without my NanoVi. I have tried other recovery machines, and nothing gets me back to a game-ready state and keeps me healthy like NanoVi. It is faster than anything I have used before. I recommend it to anyone, not just to athletes!"

- M. Boyd, Major League Baseball Pitcher

Wellness & Healthy Aging

Decades of medical research suggests that the cell's ability to metabolize oxygen begins to decline when people are in their 30s. People in their 40s may notice lower energy levels and by the time they are in their 50s, most are interested in ways to look and feel younger.

Eng3's approach relies on a unique way of influencing cellular activities to support health and help slow the aging process at the cellular level. Whether the goal is to look great, remain vital well into old age, or both, healthy cellular activity is key.

Some wellness and anti-aging benefits may include:

- faster cellular regeneration
- better oxygen utilization
- support for detoxification and weight loss
- more energy
- more vibrant skin

"NanoVi is an effective way to help people regenerate, repair, and recover. It fits perfectly with our vision of an advanced health center, focused on measuring and improving cellular health... After several sessions with the NanoVi, guests' oxidative stress and overall well-being is improved. They say things like 'after the session I feel more energized and refreshed' or 'it makes me calm and relaxed!'"

- Nino Nakashidze, MD, BIOLI Medical Wellness Resort

How it Works

NanoVi® helps protect and reinstate essential protein functions. Damage to protein structures results from oxidative stress and leads to losses of function such as a decline in performance, accelerated aging, or chronic diseases. Special properties of water, called exclusion zone or EZ water, are known to play a key role in enabling proteins to fold into their proper structures.

NanoVi promotes the formation of EZ water on surfaces such as proteins by first creating coherent domains (CDs) in a humidified airstream. This is done by exposing the airstream to excitation units inside the NanoVi device. An increase in the formation and transfer of the coherent domains (CDs) of water molecules that ultimately increase EZ water has been proven. Feeling the airstream output of NanoVi ensures you are in the environment of high humidity necessary for CDs to transfer, via the mucous membrane, to the water surrounding all proteins. By influencing specific water properties, NanoVi can boost protein folding, which in turn improves cellular function in general.

“The NanoVi device is specifically designed to address cellular activities biophysically without chemicals (pharmaceuticals), as a way to positively influence the entire organism.”

- Hans Eng, Eng3 CEO

eng3

Three models of NanoVi® technology:

NanoVi® Eco

NanoVi® Pro

NanoVi® Exo
